Title: Business Intelligence and Integration Specialist

Job Summary:

We are looking for a forward-thinking, detail-oriented and tech-savvy professional to join our BSU team as a Business Intelligence and Integration Specialist and support the integration of data across internal systems and external vendor/customer platforms via API, business intelligence tools (e.g. dashboards and reporting systems etc.), and emerging AI technologies into our business and operational environment. This role will bridge technical capabilities with business insights, supporting strategic decision-making through data automation and advanced visualization in production, sales, and supply chain operations.

Key Responsibilities:

- Develop and maintain API integrations to streamline data flow from various systems (both internal and external).
- Design and implement business intelligence dashboards and self-service reports.
- Collaborate with departments to identify reporting needs and automate routine reports.
- Evaluate and implement AI-driven tools to enhance operation efficiency, include but not limited to data processing, trend analysis, forecasting and operations optimization.
- Ensure data integrity, accuracy, consistency, reliability and security across all integrated platforms.
- Work closely with IT, data analysts, and business teams to align on solutions.
- Stay current on emerging technologies in BI and AI to advise leadership on new opportunities.
